Hiring Manager

Stripe

Dear Hiring Manager,

I am excited to apply for the **Backend Engineer role at Stripe**. I am currently pursuing a Master's in Computer Science at Texas A&M University (graduating May 2026) and bring **3+ years of Backend Engineering** experience at **JP Morgan Chase**, where I built **large-scale distributed systems** and **cloud-native applications** in a **fintech environment**.

At JP Morgan, I designed and implemented **event-driven (queue-based) systems** **handling over 15 million events per month**, along with **high-throughput data pipelines processing 1M+ records**. I also led **AWS-based microservices migrations**, improving deployment efficiency by 70% and enhancing system scalability and reliability. These experiences strengthened my ability to build **reliable, well-structured systems that operate at scale**.

I have experience in **Java, Python, distributed systems, and cloud infrastructure (AWS, Kubernetes, Docker)**, and have worked on systems where **correctness, performance, and operational stability** are critical. I am comfortable contributing across the full lifecycle, from system design to production.

I am particularly interested in Stripe's focus on building **reliable financial infrastructure at global scale**. I enjoy working on systems where **engineering quality and user impact** are closely connected, and I value environments that emphasize **ownership and strong technical standards**.

I would welcome the opportunity to contribute to Stripe's engineering team.

Sincerely,

Hitha Magadi Vijayanand
