Hiring Manager

Akamai Technologies

Hi Hiring Team,

I'm Hitha, currently pursuing my **Master's in Computer Science at Texas A&M University (graduating May 2026)**, with **over 3 years of experience as a Software Development Engineer at JP Morgan Chase**. I have built **scalable backend systems and cloud-native microservices** that support high-throughput, mission-critical financial applications.

In my previous role, I worked extensively on **distributed systems, event-driven architectures, and large-scale data pipelines**, focusing on **performance, reliability, and system resiliency**. I have strong experience in **Java, Python, and SQL**, and have leveraged **AWS services (S3, DynamoDB, ECS, Lambda)** along with **Docker and Terraform** to design and operate production systems. My work required careful attention to **latency, fault tolerance, and observability**, which I understand are critical in Akamai's globally distributed infrastructure.

I'm particularly excited about Akamai's role in powering **internet-scale platforms, edge computing, and high-performance content delivery systems**. The opportunity to work on **low-latency, highly available distributed systems** that directly impact global user experience strongly aligns with my interests and experience.

I bring an **ownership mindset**, strong collaboration skills, and a focus on **building reliable and efficient systems at scale**. I would love the opportunity to contribute to Akamai's engineering teams and help deliver resilient, high-performance solutions.

Best regards,

Hitha
