Hiring Manager

Glean

Hi Hiring Team,

I'm Hitha, currently pursuing my **Master's in Computer Science at Texas A&M University (graduating May 2026)**. I bring **over 3 years of experience as a Software Development Engineer at JP Morgan Chase**, where I designed and built **scalable backend systems and cloud-native microservices** in a high-impact fintech environment.

In my previous role, I worked extensively on **distributed backend systems, event-driven architectures, and high-throughput data pipelines**, building reliable services that supported critical financial workflows. I have strong experience with **Java, Python, and SQL**, and have leveraged **AWS services (S3, DynamoDB, ECS, Lambda), Docker, and Terraform** to design and deploy production-grade systems. My work required a strong focus on **correctness, reliability, and observability**, especially in systems handling sensitive financial data and large-scale transactions.

I'm particularly excited about this role at Glean because of its focus on **usage metering, pricing infrastructure, and billing systems**, which demand both **technical rigor and cross-functional collaboration**. I have experience working closely with **product, business, and cross-functional teams** to translate requirements into scalable system designs, and I enjoy making **clear tradeoffs to balance performance, cost, and maintainability**.

Additionally, I'm very interested in the opportunity to contribute to systems that manage **LLM and AI-related cost structures**, including areas like **usage tracking, anomaly detection, and cost optimization**. Given my background in **large-scale systems and interest in AI-driven platforms**, I'm excited about helping build reliable infrastructure that enables product teams to ship AI features with confidence.

I would love the opportunity to contribute to Glean's **Billing & Revenue Platform** and help scale systems that directly impact business and customer outcomes.

Best regards,

Hitha
