Hiring Manager

Rippling

Dear Hiring Manager,

I'm excited to apply for the Software Engineer role at Chime. I bring **3+ years of experience building scalable backend systems**, with strong expertise in **APIs, distributed systems, and cloud architectures**.

At JP Morgan Chase, I migrated microservices to AWS ECS (70% faster deployments) and built an **event-driven system processing 15M+ events/month**, ensuring **high reliability and scalability**. I have hands-on experience designing **REST APIs**, working with **PostgreSQL, DynamoDB, and Redis**, and building **high-performance, maintainable systems**.

I also bring a strong **product mindset**, collaborating cross-functionally to solve user problems—such as improving **search accuracy by 30% using real-time NLP systems**. I prioritize **clean, tested code**, and thrive in environments focused on **experimentation, iteration, and impact**.

Chime's mission to improve financial access resonates with me, and I'd love to contribute by building **resilient, member-focused systems at scale**.

Sincerely,

Hitha Magadi Vijayanand
