Hiring Manager

Twitch

Dear Hiring Manager,

I am excited to apply for the Software Engineer role at Twitch. I am currently pursuing a Master's in Computer Science at Texas A&M University (graduating May 2026) and bring **3+ years of software engineering** experience at **JP Morgan Chase**, where I built **scalable backend systems and user-facing financial applications**.

At JP Morgan, I worked on **event-driven systems handling over 15M events per month** and built **high-throughput APIs and data pipelines processing 1M+ records**. I also contributed to **AWS-based microservices (ECS, DynamoDB, Lambda)**, improving system scalability and deployment efficiency. My work focused on building **reliable systems that support real-world user workflows**.

I have experience in **Java, Python, and distributed systems**, along with familiarity with **frontend technologies and full-stack development**, allowing me to contribute to **end-to-end product features**. I enjoy building systems that are not only scalable but also deliver a smooth and engaging user experience.

I'm particularly interested in Twitch because of its focus on building **interactive, real-time products for a global community**. I'm excited by the challenge of developing systems that support **live streaming, engagement, and user interaction at scale**, and I would love to contribute to improving the experience for creators and viewers.

I would welcome the opportunity to contribute to Twitch's engineering team.

Sincerely,

Hitha Magadi Vijayanand
