Hiring Manager

Rippling

Dear Hiring Manager,

I am excited to apply for the Forward Deployed Engineer role at Rippling. I am currently pursuing a Master's in Computer Science at Texas A&M University (graduating May 2026) and bring **3+ years of software engineering experience at JP Morgan Chase**, where I built **scalable backend systems and cloud-native applications in a fintech environment**

At JP Morgan, I worked on **event-driven systems handling 15M+ events per month**, built **data pipelines processing 1M+ records**, and contributed to **AWS-based microservices** that improved scalability and deployment efficiency. I also led migrations from legacy systems to cloud-native architectures, making **design and tradeoff decisions** around performance, reliability, and cost in production systems.

I am particularly drawn to this role because it combines **strong engineering with direct customer impact**. I enjoy working closely with stakeholders to understand business problems, translate them into technical solutions, and deliver systems end-to-end. My experience building **APIs, data pipelines, and distributed systems**, along with collaborating across teams, aligns well with designing and implementing custom solutions on the Rippling platform.

I would welcome the opportunity to contribute to Rippling's engineering team.

Sincerely,

Hitha Magadi Vijayanand
