Hiring Manager

Mercury

Dear Hiring Manager,

I am excited to apply for the Software Engineer role at Mercury. I am currently pursuing a Master's in Computer Science at Texas A&M University (graduating May 2026) and bring **3+ years of software engineering experience at JP Morgan Chase**, where I built **scalable backend systems and cloud-native applications in a fintech environment**.

At JP Morgan, I worked on **event-driven systems handling over 15M events per month** and built **high-throughput APIs and data pipelines processing 1M+ records**. I also contributed to **AWS-based microservices**, improving deployment efficiency and system scalability. My work involved making **design and architectural decisions**, balancing trade-offs between performance, reliability, and maintainability in production systems.

I have experience in **Java, Python, and SQL**, and I enjoy building backend systems that directly support **user-facing products**. I've collaborated closely with product and business teams to deliver features end-to-end, and I value building systems that are both **technically sound and intuitive for users**.

I'm particularly drawn to Mercury's focus on building **modern financial products with strong design and user experience**. I enjoy working in environments where engineers take ownership, collaborate closely with product and design, and build systems that meaningfully improve how users interact with financial tools. I'm also excited about the opportunity to learn new technologies, including **Haskell**, and contribute in a fast-moving, product-driven team.

Thank you for your time and consideration. I would welcome the opportunity to contribute to Mercury's engineering team.

Sincerely,

Hitha M V
