Hiring Manager

Ramp

Dear Hiring Manager,

I am excited to apply for the Software Engineer role at Ramp. I am currently pursuing a Master's in Computer Science at Texas A&M University (graduating May 2026) and bring **3+ years of experience at JP Morgan Chase**, where I built **scalable backend systems, data pipelines, and cloud-native applications in a fintech environment**.

At JP Morgan, I designed **event-driven systems handling 15M+ events/month** and built **data ingestion and transformation pipelines processing 1M+ records**. I also contributed to **AWS-based microservices**, improving system scalability and reliability. My work required making **practical tradeoffs** around performance, cost, and maintainability in production systems.

I am particularly interested in Ramp's focus on **data-driven product development and fast iteration**. I've worked on systems that process and structure large volumes of data, and more recently, on **LLM/RAG-based applications**, which strengthened my interest in applying AI to real-world workflows. I enjoy building systems that directly impact business outcomes and iterating quickly based on feedback and metrics.

Ramp's emphasis on **speed, ownership, and pragmatic decision-making** strongly resonates with how I approach engineering. I would welcome the opportunity to contribute to building reliable data systems and products that drive meaningful impact.

Sincerely,

Hitha Magadi Vijayanand
