Hi Hiring Team,

I'm excited to apply for the **Software Engineer** role. Your focus on **AI-first products**, **ownership**, and **real-world impact** strongly aligns with my experience.

I am currently pursuing my **Master's in Computer Science at Texas A&M University (Expected May 2026)**. Previously, at **JP Morgan Chase**, I built **scalable, production-grade systems** including migrating microservices to **AWS ECS (70% faster deployments)** and designing **event-driven architectures** handling **15M+ events/month**.

I've also developed **LLM-powered systems**, including a **Hybrid Self-RAG framework** that improved **factual accuracy** and reduced **hallucinations**, along with **embedding-based validation pipelines** for reliable outputs.

I bring strong fundamentals in **data structures**, **distributed systems**, and **API design**, along with hands-on experience building **AI-enabled features**. I thrive in **collaborative environments** that value **clarity**, **craftsmanship**, and **shared ownership**.

I'd love to contribute to building **scalable, AI-driven systems** on your team. Thank you for your consideration.

Best regards,

Hitha Magadi Vijayanand
