**Hiring Manager**

Scale AI

Dear Hiring Manager,

I am excited to apply for the Software Engineer role at Scale AI. I am currently pursuing my Master's in Computer Science at Texas A&M University (graduating May 2026) and bring **3+ years of software engineering experience at JP Morgan Chase**, where I built **scalable backend systems and data-driven applications in a fintech environment**.

At JP Morgan, I worked on **event-driven systems handling over 15M events per month** and built **high-throughput data pipelines processing 1M+ records**, along with **AWS-based microservices** that improved system scalability and deployment efficiency. My work involved building systems that process large volumes of data while maintaining **reliability, performance, and operational stability** in production.

I also have experience working on **LLM/RAG-based systems**, including building applications that retrieve and process information to support real-time use cases. This has strengthened my interest in building **AI-driven products and infrastructure at scale**, similar to Scale's work in labeling, data quality, and model evaluation.

I enjoy working in **product-focused environments**, collaborating with cross-functional teams, and building features end-to-end from backend systems and APIs to integrating with user-facing applications. I'm particularly excited about Scale AI's focus on combining **machine learning, data infrastructure, and product engineering** to solve complex problems at scale.

I would welcome the opportunity to contribute to Scale AI's engineering team.

Sincerely,

Hitha
