Hiring Manager

Amplitude

Dear Hiring Manager,

I'm excited to apply for the **Software Engineer** role focused on **backend systems** and **data infrastructure**. I'm currently pursuing my **Master's in Computer Science** at Texas A&M University and have experience building **scalable backend services**, **ETL pipelines**, and **cloud-native systems**.

At JPMorgan Chase & Co., I developed **distributed systems** and **data pipelines** processing **1M+ records**, and migrated legacy systems to **AWS (S3, DynamoDB)**—improving **scalability** and reducing **costs**. I also built **event-driven architectures (RabbitMQ)** handling **15M+ events/month**, ensuring **reliability** and **performance**.

I bring strong expertise in **Java**, **Spring Boot**, and **system design**, with a focus on **high-performance, maintainable systems**. I enjoy **collaborating cross-functionally**, contributing to **code reviews**, and solving **data-intensive problems**.

I'm particularly excited about this role's focus on **scaling data infrastructure** and **optimizing data pipelines**, and I'd love to contribute to building **robust, high-impact systems**.

Sincerely,

Hitha Magadi Vijayanand
