Hiring Manager

Applied Intuition

Dear Hiring Manager,

I'm excited to apply for the **Software Engineer - Backend** role at **Applied Intuition**. I'm currently pursuing a **Master's in Computer Science (Texas A&M, May 2026)** and bring **3+ years of backend experience at JP Morgan Chase**, building **scalable, cloud-native systems**.

I've designed **event-driven microservices (15M+ events/month)** using **AWS (S3, DynamoDB, ECS, Lambda)**, with strong experience in **distributed systems, APIs, and real-time data pipelines**. I've also worked with **Docker, Kubernetes, and NoSQL (Redis)**, focusing on **low-latency, reliability, and system resilience**.

I'm particularly excited about building **real-time backend services for autonomous systems**, including **remote assist platforms, data streaming, and multi-region cloud infrastructure (gRPC, protobuf)**, while ensuring **fault tolerance and performance at scale**.

I'd love to contribute to building **robust, high-performance backend systems** at Applied Intuition.

Best Regards,

Hitha Magadi Vijayanand
