Hiring Manager

Airbnb

Hi Hiring Team,

I'm currently pursuing a **Master's in Computer Science at Texas A&M University (May 2026)**, with experience building **scalable backend systems** and **cloud-native distributed services** at JPMorgan Chase & Co..

I have strong programming experience in **Java and Python**, and have designed **fault-tolerant, event-driven systems** using AWS (S3, DynamoDB, ECS, Lambda). My work includes building **high-throughput APIs and data pipelines**, with a focus on **scalability, reliability, and system design** in service-oriented architectures.

I also have exposure to **machine learning systems** and am particularly interested in how intelligent systems can enhance user experiences at scale. I enjoy working across teams and have experience collaborating with **product, data, and engineering stakeholders** to design and deliver impactful solutions.

I'm excited about the opportunity to contribute to Airbnb and help build **scalable, reliable systems** that power global user experiences.

Best regards,

Hitha
