Hiring Manager

Airtable

Dear Hiring Team,

I'm excited to apply for the Software Engineer, Data role at Airtable. I'm currently pursuing a **Master's in Computer Science** at **Texas A&M University** (May 2026) and bring over **three years of experience** at **JP Morgan Chase**, where I built **scalable backend systems, data pipelines**, and **cloud-native microservices** in a high-throughput fintech environment.

At JP Morgan Chase, I designed **event-driven data pipelines** processing **15M+ events per month**, built **ETL workflows** to ingest and transform large datasets, and developed **data models and APIs** that enabled reliable reporting and operational insights across teams. I also led **cloud migrations to AWS (S3, DynamoDB, ECS, Lambda)**, improving **data reliability, scalability, and cost efficiency**. This experience aligns closely with building **foundational pipelines, business tables, and data marts** that support decision-making at scale.

I'm particularly excited about Airtable's shift toward an **AI-native platform**. In my recent work, I built a **FactScore-based evaluation framework for LLMs** and a **Hybrid RAG system**, which deepened my interest in **instrumenting and evaluating AI systems**. I actively use tools like Cursor and Claude for **LLM-assisted development, debugging, and data exploration**, and I'm eager to apply these workflows to building **AI-aware data pipelines and discovery systems**.

I enjoy working at the intersection of **data engineering and product impact**—partnering with stakeholders, translating ambiguous questions into **well-modeled datasets**, and ensuring systems are **reliable, consistent, and easy to reason about**. Airtable's approach of building on the same platform customers use, and its focus on **AI usage metrics and data-driven product insights**, strongly resonates with how I think about engineering.

I would love the opportunity to contribute to building **scalable, trustworthy data infrastructure** that helps Airtable understand and shape its AI-powered product ecosystem.

Sincerely,

Hitha Magadi Vijayanand
