Hiring Manager

SoFi

Dear Hiring Team at SoFi,

I'm excited to apply for the **Software Engineer role at SoFi**. With over **three years of experience building scalable backend systems at JP Morgan Chase** and currently pursuing my **Master's in Computer Science at Texas A&M University**, I bring a strong foundation in **distributed systems, cloud-native architecture, and API-driven development**.

At JP Morgan Chase, I developed and scaled **backend services using Java and Spring Boot** within a **service-oriented architecture**. I led the **modernization of critical systems**, upgrading Java and Spring Boot versions and migrating legacy systems to **AWS-based cloud-native solutions**, significantly improving **scalability and reducing infrastructure costs**. I also designed **event-driven architectures handling over 15 million events per month**, ensuring **high availability and performance** in production environments.

I thrive in **collaborative environments**, take **end-to-end ownership**, and enjoy **solving complex problems at scale**. I'm particularly excited about SoFi's mission to **help people achieve financial independence** and would love to contribute to building **reliable, high-impact systems**.

Sincerely,

Hitha Magadi Vijayanand
