Hiring Manager

Affirm

Dear Hiring Team at Affirm,

I'm excited to apply for the Software Engineering role on the Credit Engineering team at Affirm. I'm currently pursuing my Master's in Computer Science at Texas A&M University and bring over three years of experience as a backend engineer at JP Morgan Chase, where I built scalable, cloud-native systems and APIs.

In my experience, I've designed and implemented **event-driven architectures handling 15M+ events per month**, built **data pipelines**, and worked extensively with **AWS, distributed systems, and production APIs**. I've also contributed to modernizing legacy systems and ensuring reliability at scale—balancing **speed, quality, and system resilience**, which closely aligns with Affirm's engineering values.

I'm particularly drawn to Affirm's mission to build **transparent and consumer-friendly credit systems**, and the opportunity to work on underwriting platforms that directly impact financial decisions. I'm excited about solving problems at the intersection of **backend engineering, risk systems, and real-time decisioning**, while collaborating closely with product and risk teams.

I'd love the opportunity to contribute to Affirm's mission and engineering team.

Sincerely,

Hitha Magadi Vijayanand
