Hiring Manager

Affirm

Dear Hiring Team,

I'm excited to apply for the **Software Engineer II - Backend (Credit Decisioning)** role at **Affirm**. I'm currently pursuing my **Master's in Computer Science at Texas A&M University** and bring over **three years** of experience as a **Software Engineer at JP Morgan Chase**, where I built **scalable backend systems** and **cloud-native microservices**.

I have strong experience in **Java and Python**, and have designed and deployed **distributed systems** using **AWS, MySQL, and Kubernetes**. My work includes building **event-driven architectures handling 15M+ events/month**, developing **high-throughput APIs**, and delivering **well-tested, maintainable code** in production environments.

I'm comfortable working with **large codebases**, debugging complex issues, and contributing through **code reviews and collaborative development**. I take strong **ownership of my work**, actively seek feedback, and continuously focus on improving both **system design and code quality**.

I'm particularly excited about the opportunity to solve **real-world problems through scalable backend systems**, and to collaborate with **cross-functional teams** to deliver impactful solutions.

I'd love the opportunity to contribute to your team.

Sincerely,

Hitha Magadi Vijayanand
