**Hiring Manager**

SoFi

**Dear Hiring Team at SoFi,**

I'm excited to apply for the Full-Stack Software Engineer, Benefits and Rewards role at SoFi. I'm currently pursuing my Master's in Computer Science at Texas A&M University and bring over three years of experience as a Software Engineer at JP Morgan Chase, where I built scalable, cloud-native applications and backend systems.

My experience includes developing **microservices using Java and Spring Boot**, designing **event-driven architectures handling high-throughput workloads**, and deploying systems on **AWS using Docker and Kubernetes**. I've also worked with **relational databases like PostgreSQL/MySQL**, optimizing data pipelines and access patterns for performance and reliability. On the frontend side, I have experience with **JavaScript/TypeScript-based applications**, enabling me to contribute across the stack.

I'm particularly excited about SoFi's mission to build **user-centric financial products** and the opportunity to work on systems that power **benefits, rewards, and customer engagement** at scale. I enjoy balancing **engineering excellence with business impact**, and collaborating cross-functionally to deliver meaningful user experiences.

I'd love the opportunity to contribute to SoFi's platform.

Sincerely,

Hitha Magadi Vijayanand
