Hiring Manager

Adyen

Dear Hiring Manager,

I am excited to apply for the Software Engineer role focused on AI at Adyen. I am currently pursuing a Master's in Computer Science at Texas A&M University (graduating May 2026) and bring **3+ years of experience at JP Morgan Chase**, where I built **scalable backend systems and data-intensive applications in a fintech environment**.

At JP Morgan, I developed **event-driven systems handling 15M+ events/month** and built **high-throughput data pipelines and APIs** supporting production workloads. My work involved designing systems with strong guarantees around **reliability, scalability, and performance**, and making practical tradeoffs in real-world environments.

More recently, I have worked on **LLM/RAG-based systems**, including building pipelines for retrieval, validation, and improving factual accuracy of model outputs. This has strengthened my interest in **bridging AI research with production systems**, particularly in areas like data-driven workflows and automation.

I am particularly drawn to this role's focus on **building production-grade AI applications**, translating research into scalable systems, and applying AI to real-world financial problems. I enjoy working on problems that require both **engineering rigor and creative thinking**, and I'm excited about contributing to Adyen's vision for AI in finance.

Sincerely,

Hitha Magadi Vijayanand
