Hiring Manager

Check

Dear Hiring Team,

I am a Master's student in Computer Science at Texas A&M University, graduating in May 2026, and I am excited to apply for the Software Engineering role. With professional experience building scalable backend systems, cloud infrastructure, and data-driven platforms, I am particularly drawn to the opportunity to work on product-focused systems using technologies such as Python, React, and AWS.

Previously, as a Software Engineer at JPMorgan Chase, I worked on modernizing large-scale production systems and building distributed services. I migrated microservices to AWS ECS, improving deployment efficiency by 70%, and redesigned a user notification workflow using an event-driven architecture powered by RabbitMQ that now processes over 15 million events per month. I also contributed to data pipelines and scalable search systems, developing APIs and infrastructure that supported high-volume internal platforms.

Alongside my industry experience, my graduate work focuses on machine learning and large-scale systems. I recently built a Hybrid Self-RAG system to improve the factual reliability of language model outputs and implemented optimization pipelines for error-correcting codes using evolutionary algorithms and linear programming. These projects strengthened my ability to design robust systems, work across complex problem spaces, and rapidly iterate on production-grade solutions.

I am particularly excited about this role because it combines strong engineering fundamentals with building real product features that solve meaningful user problems. Working across backend services, frontend systems, and cloud infrastructure aligns closely with both my experience and the type of engineering challenges I enjoy most. I value environments where engineers take ownership, move quickly, and collaborate closely with teammates to ship high-quality systems.

I would welcome the opportunity to contribute to your team and help build reliable, scalable systems that support your product and users.

Thank you for your time and consideration.

Best regards,

Hitha Magadi Vijayanand
