Hiring Manager

Goldman Sachs

Dear Hiring Committee,

I am writing to apply for the Software Engineer (New Analyst) 2026 role at Goldman Sachs. I am a Master's student in Computer Science at **Texas A&M University**, graduating **May 2026**, with **3+ years of software engineering experience** at **JP Morgan Chase**.

At **JP Morgan**, I worked in the **Asset & Wealth Management** division, where I contributed to backend and distributed systems **supporting critical financial workflows**. I led platform modernization initiatives including upgrading to **Java 17** and Spring Boot 3, migrating services to **AWS**, and designing **event-driven pipelines** processing 15M+ events per month. These efforts improved system reliability, reduced deployment time by 70%, and lowered infrastructure costs by 80%.

I have experience building **scalable data platforms**, including **Elastic Search** pipelines for 1M+ records and NLP-driven search improvements that increased accuracy by 50%. I enjoy working on large-scale, performance-critical systems and bring strong foundations in data structures, algorithms, and system design.

I am excited by Goldman Sachs' focus on engineering excellence and technology-driven impact, and I would welcome the opportunity to contribute to its engineering teams.

Sincerely,

Hitha Magadi Vijayanand
