Hiring Manager

EarnIn

Dear Hiring Manager,

I'm excited to apply for this role focused on **agent-driven chatbots** and **GenAI workflows**. With **3+ years of software engineering experience** at JP Morgan Chase and a Master's in Computer Science at Texas A&M, I bring strong expertise in **scalable systems**, **end-to-end ownership**, and **AI-driven applications**.

At JP Morgan, I built **event-driven systems** processing **15M+ events/month**, led **cloud migrations to AWS (70% faster deployments)**, and developed **intelligent search systems improving accuracy by 30%+**. I have consistently delivered **reliable, maintainable systems** while owning features from **design → implementation → impact**.

I also have hands-on experience with **LLMs and GenAI systems**, including building a **Hybrid Self-RAG pipeline** to reduce hallucinations and improve factual accuracy. I enjoy working with **modern AI tools**, rapidly iterating, and exploring better ways to build **AI-powered products**.

I'm particularly excited about contributing to **real-world AI systems**, collaborating across teams, and pushing the boundaries of **AI-assisted development**.

Thank you for your time and consideration.

Sincerely,

Hitha Magadi Vijayanand
